century. At that time there existed devices that worked under the principle of the steam engine, being the most successful secularized by the English inventor Thomas Newcomen.

The 10 Most Important Inventions of the Industrial Revolution

Steel is often cited as the first of several new areas for industrial mass-production, which are said to characterise a "Second Industrial Revolution", beginning around 1850, although a method for mass manufacture of steel was not invented until the 1860s, when Sir Henry Bessemer invented a new furnace which could convert molten pig iron into steel in large quantities. However, it only became widely available in the 1870s after the process was modified to produce more uniform quality.
